- 6) ☐ Other: \_\_\_\_\_.

## DETAILED ACTION

### *Specification*

1. The disclosure is objected to because of the following informalities: page 1, line 20, serial number of a patent application should be identified instead of a series of "\*\*\*\*\*" marks. Appropriate correction is required.
2. Because of the lengthy specification in this application, it has not been checked to the extent necessary to determine the presence of all possible minor and informal errors. Applicant's cooperation is therefore requested in promptly correcting any errors of which the applicant may become aware of in the specification and/or the drawings.

### *Election/Restriction*

3. Applicant's election of claims 1 and 9 in Paper No. 3, filed on 7/11/02, is acknowledged. Since Applicant did not provide any traversal arguments to the restriction requirement, the response is considered as election without traverse; therefore, *the election/restriction is made FINAL*.

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. **Claims 1 and 9** are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's Admitted Prior Art fig 1 (hereafter APA fig 1) in view of Fujitami et al (US 4891567).

APA fig 1 substantially discloses the claimed invention, except for the limitations of the upper and lower pole plates, wherein each of the pole plates respectively having a central tubular portion .

Fujitami, however, teaches a stator for a brushless DC motor (fig 1) having a upper and lower pole plates (22, 24), wherein each of the pole plates respectively having a central tubular portion (30, 31) so that the two stator pole plates can be simply assembled and magnetically integrated.

Thus, it would have been obvious to one skilled in the art at the time the invention was made to modify the stator assembly of the APA fig 1 by configuring each of the pole plates with a central tubular portions, as taught by Fujitami. Doing so would enable the stator pole plates to be magnetically integrated results in enhance magnetic characteristics of the stator.
